

# INTELLI-SCOUT™

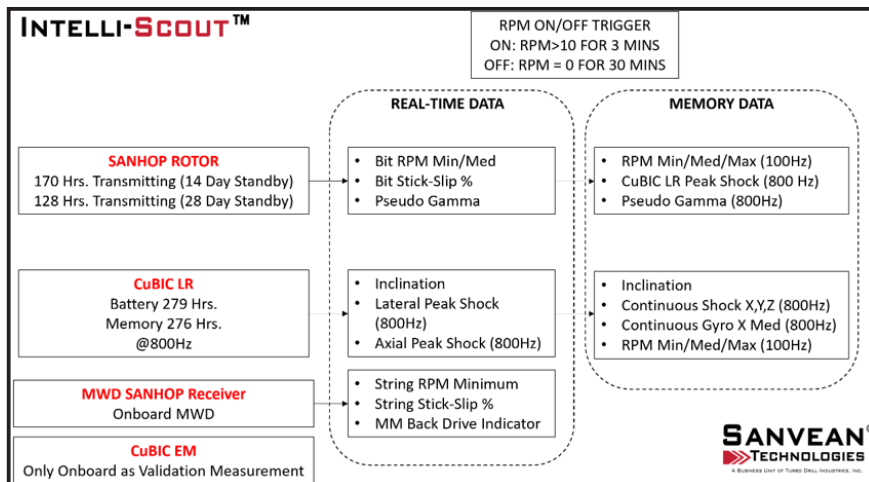

## Rental Services

In partnership with Turbo Drill Industries, Sanvean Technologies can now deliver real-time drilling dynamics (3-axis Shock, RPM and Temperature), near-bit inclination and pseudo gamma measurements from Turbo Scout® drilling motors. The Intelli-Scout™ motor has been designed and developed utilizing proven Turbo Drill Industries mud motor technology along with Sanvean Technologies high-frequency sensors.

Intelli-Scout delivers real-time data from the motor that was previous only available in memory. The data is transmitted in real-time to MWD via a short-hop communication system. This allows drilling parameter decisions to be made while drilling based on drill bit dynamics, and enables geo-steering through near-bit inclination and pseudo gamma measurements.

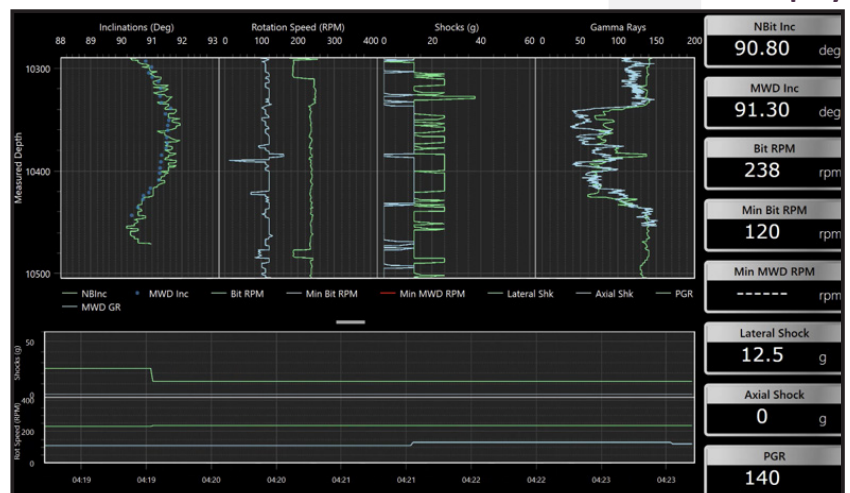

Intelli-Scout is available through our directional drilling services division, Scout Drilling Technologies, and our rental services division, Scout Downhole. Intelli-Scout is suitable for oil and gas, and geothermal drilling applications.
